### List of the 23773 pterygot species in Turkey based upon the info-system of the Cesa

Ahmet Ömer Koçak

**Abstract:** List of the 23773 pterygot species in Turkey based upon the info-system of the Cesa. *Priamus* (Suppl.) 32: 1-876.

This report deals with the present results of the Entomofauna studies in Turkey. Totally 23773 species are given. The major orders and their species numbers are as follows: *Lepidoptera* (5363), *Diptera* (3317), *Hymenoptera* (5097), *Coleoptera* (6159), and the rest of the pterygot orders (3837). Separately, 6562 generic names are listed with their synonyms. This report is based upon the field studies as well as the literary data. Totally, 4623 publications are listed alphabetically. Dangerous studying conditions in Turkey is discussed and links are given for online access.

**Key words:** *Pterygota*, *Lepidoptera*, *Diptera*, *Hymenoptera*, *Coleoptera*, fauna, Turkey

Concerning the studies on the “Entomofauna of the World”, the authors made their first attempt in 2007 (Koçak & Kemal, 2007). On the “Entomofauna of Turkey”, several temporary reports have been published so far. Thenceforth, numerous new faunal additions, nomenclatural and taxonomical changes were made. In the present –urgently prepared - revised and advanced list of the *Pterygota* of Turkey comprises **23773** species, belonging to **6562** genera/subgenera.

In our previous reports and studies, we usually add numerous images of insects taken by us in nature. It is the time now to show our studying conditions in Turkey (in cities also in remote areas). In the footnote, there are a few links from the press that show clearly the present situation of our country.<sup>1</sup> It has been continuing for more than 25-30 years. We hope that we can continue our research programs safely, in order to reach to our scientific goal; otherwise this report may be the last one and remains incomplete.
